

# Prescription Intervention Program

Better Care. Lower Cost.

Prescription utilization is a powerful tool in clinical treatment, but one that must be closely managed. This strategic program is laser focused on proactively controlling prescribed opioid medication.

Our Prescription Intervention Program (PIP) ensures that prescribed medications being utilized are appropriate and effective in restoring health and productivity. Medical necessity is based on evidence-based medical guidelines and clinical best practices.

After a thorough analysis of the prescribed medications, medical records and pharmacy history, the reviewing physician provides a detailed report including:

- Evaluation of pharmacy utilization
- Identification of physician dispensing
- Identification of possible drug interaction
- Clear recommendations for a more effective and/or cost-efficient medication regimen

In order to ensure appropriate utilization, our nurses provide oversight and management for three consecutive office visits after the peer-to-peer review is completed.

## FEATURES

- Quantified success through vigilant prescription management
- Physician contact with treating providers
- Completion of peer-to-peer reviews with the prescribing physician when appropriate
- Clear path for ongoing medication management
- Diverse range of physician specialties
- Expert interpretation of pharmacy reports

## BENEFITS

- Proactive management toward appropriate pharmacy utilization
- Support to ensure treatment plans are enforced
- Reduced potential for opioid addiction
- Clinical oversight embedded with leadership
